Functional Medicine

Functional Healthcare involves looking at the body's systems that create change in your metabolism as interlinked and complex, instead of merely identifying one part of your metabolism as elevated or depressed. In Functional Healthcare, factors that change metabolism, altering your body's response, will be evaluated first. This means that we do an evaluation of the complex interactions of organ function; creation, transport and absorption of hormones; detoxification; digestion and gut function; sugar metabolism; and your body's ability to deal with stress.

The following form will assist us in identifying the vicious cycles that feed each other causing your current health condition. We can then provide support, counseling and a treatment program to unlock these vicious cycles, enabling you to regain a health you may have not thought possible.
